Patient information

**Renal Patient Database
Why We Hold Information About You**

Nephrology Directorate

Why do we have a Renal Database?

The Royal Liverpool and Broadgreen University Hospital Trust (RLBUHT) has for many years been at the centre of providing services to people in this region with renal disease.

An essential part of providing this service is to have information about you readily available. Much of this information, such as demographic details (name, address, postcode etc) and clinical results is held on the Renal Database. This is located securely at Royal Liverpool University Hospital.

The doctors, nurses, secretaries and other healthcare workers at Royal Liverpool University Hospital Trust who are involved in your care have access to these details. The Renal Database is an ongoing record of your clinical history; it is a valuable resource to help us provide care.

Who else can see your details?

With the development of services, increasingly, certain types of care are available at other hospital sites, particularly dialysis services in 'satellite' locations.

Investment in services has included making the renal database available to staff involved in renal care at Aintree, Broadgreen, Warrington, Waterloo Day Hospital and St Helens Hospital.

Our commitment to your confidentiality

Across the NHS, the Caldicott Report has set standards for the use of data including ensuring confidentiality.

All staff involved in healthcare are required to only ever access patient details as part of delivering healthcare service to the individual.

Until the development of services at Aintree, the responsibility for ensuring confidentiality regardless of location has been the total responsibility of RLBUH Trust. Making the Renal database available to the Aintree team means that the information is being shared electronically across two NHS organisations.

Ensuring the appropriate use of the database and protecting your confidentiality is now a shared responsibility between Royal Liverpool & Broadgreen University Hospital Trust and Aintree Hospitals Trust.

Information Sharing Protocols agreed by the hospitals provide strict rules that govern the patient information that is shared between them. Data is password protected and security of the database is regularly reviewed and updated.

By keeping you informed of this development, we hope you will be reassured that data is shared in an appropriate, confidential and secure way. If at anytime you would like any further information, please don't hesitate to speak to the person in charge of your care.

Everyone who works in the NHS has a legal obligation to keep information about you confidential. Other units who receive information from us are also legally obliged to keep it confidential.

We regularly review our security and the confidentiality of all patient information.

If at anytime you would like to know how we use your information you can speak to the person in charge of your care.
